

Vaping Talk to Youth about the Risks

National Center for Health in Public Housing

Wednesday, November 13, 2019

Disclaimer

- The National Center for Health in Public Housing (NCHPH), a project of North American Management, is supported by the Health Resources and Services Administration (HRSA) of the U.S. Department of Health and Human Services (HHS) under grant number U30CS09734, a National Training and Technical Assistance Cooperative Agreement (NCA) for \$608,000, and is 100% financed by this grant. This information or content and conclusions are those of the author and should not be construed as the official position or policy of, nor should any endorsements be inferred by HRSA, HHS or the U.S. Government.
- The mission of the National Center for Health in Public Housing (NCHPH) is to strengthen the capacity of federally funded Public Housing Primary Care (PHPC) health centers and other health center grantees by providing training and a range of technical assistance.

Q&A

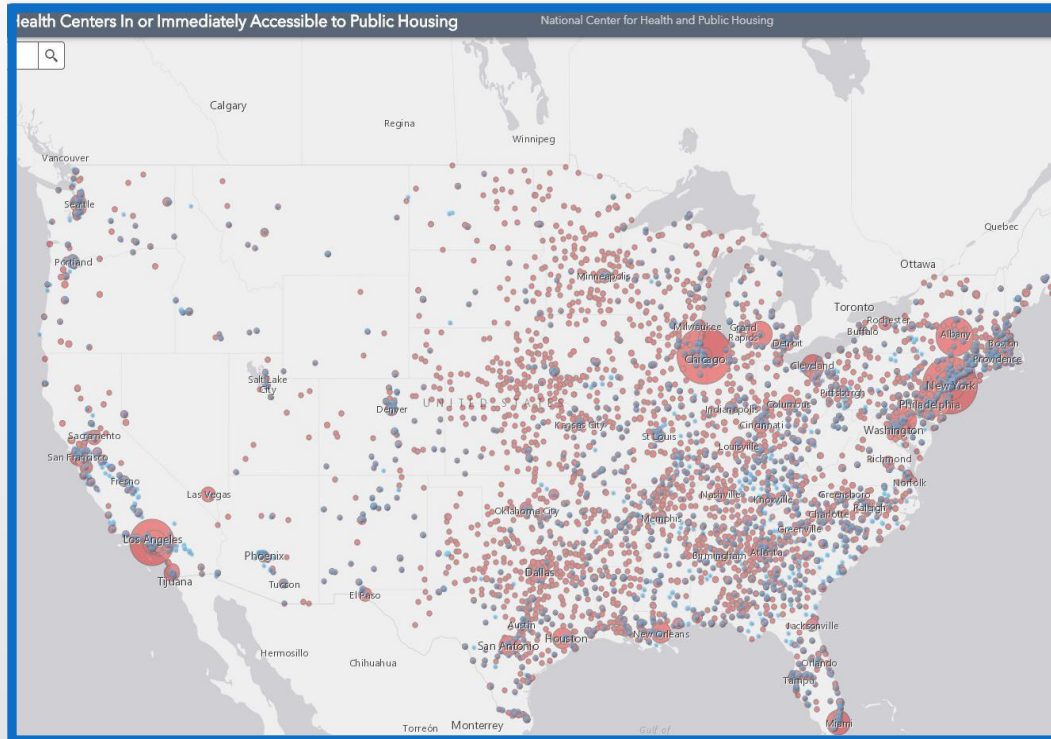

Learning Objectives

- Discuss the health risks associated with vaping
- Enumerate strategies to prevent youths from vaping
- Review South Boston Health Center's anti-vaping initiative

Health Centers Close to Public Housing

- 1,400 Federally Qualified Health Centers (FQHC) = 28.4 million
- 385 FQHCs In or Accessible to Public Housing = 4.4 million patients
- 106 Public Housing Primary Care (PHPC) = 817,123 patients

National Center for Health in Public Housing

March 2019

Introduction

The National Center for Health in Public Housing (NCHPH) has collaborated with the Centers of Disease Control and Prevention's Office on Smoking and Health (CDC OSH) and their national tobacco education campaign contractors at the PloShare Group to increase access to smoking cessation counseling in patients served at Health Centers. For the past 17 years, NCHPH has improved access to care for medically vulnerable populations in part through a national cooperative agreement funded by the Health Resources and Services Administration (HRSA). NCHPH provides training, technical assistance, research, and outreach to Health Centers located in or immediately accessible to public housing. NCHPH has been working with several national, state, and local partners to address the U.S. Department of Housing and Urban Development's (HUD) new requirement that all public housing developments implement a smoke free policy by the end of July 2018.

Smoking Rates Among Public Housing Residents

Public housing residents are more likely to smoke and suffer from health conditions that are exacerbated by smoking and secondhand smoke

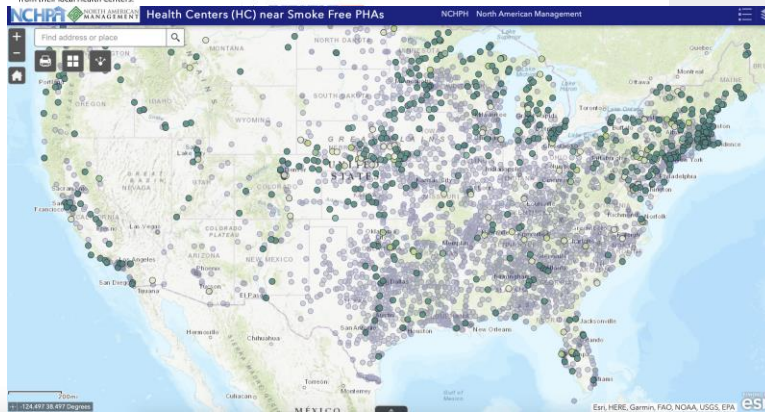

exposure, such as asthma, diabetes, and COPD, compared to the general adult population. Currently, around 34% of public housing residents smoke compared to 22% of the general adult population.¹ Given the new smoke-free requirements at all public housing developments, NCHPH anticipates that many public housing residents will attempt to quit smoking and/or seek smoking cessation counseling and services from their local Health Centers.
